

Despite adults' knowledge of and perceived daily interactions with AI remaining unchanged after two years, **Americans have become significantly more wary about AI's impact on everyday life.**

That's according to findings from **the Stevens TechPulse Report: A Perspective on Americans' Attitudes Toward Artificial Intelligence**, which compared trends longitudinally with the Stevens Institute of Technology/Morning Consult Poll completed in 2021 and new poll questions about generative AI.

Adults are **10% less likely now than in 2021 to say positives of AI outweigh negatives**

Adults are more likely to feel **negative emotions** about AI than positive

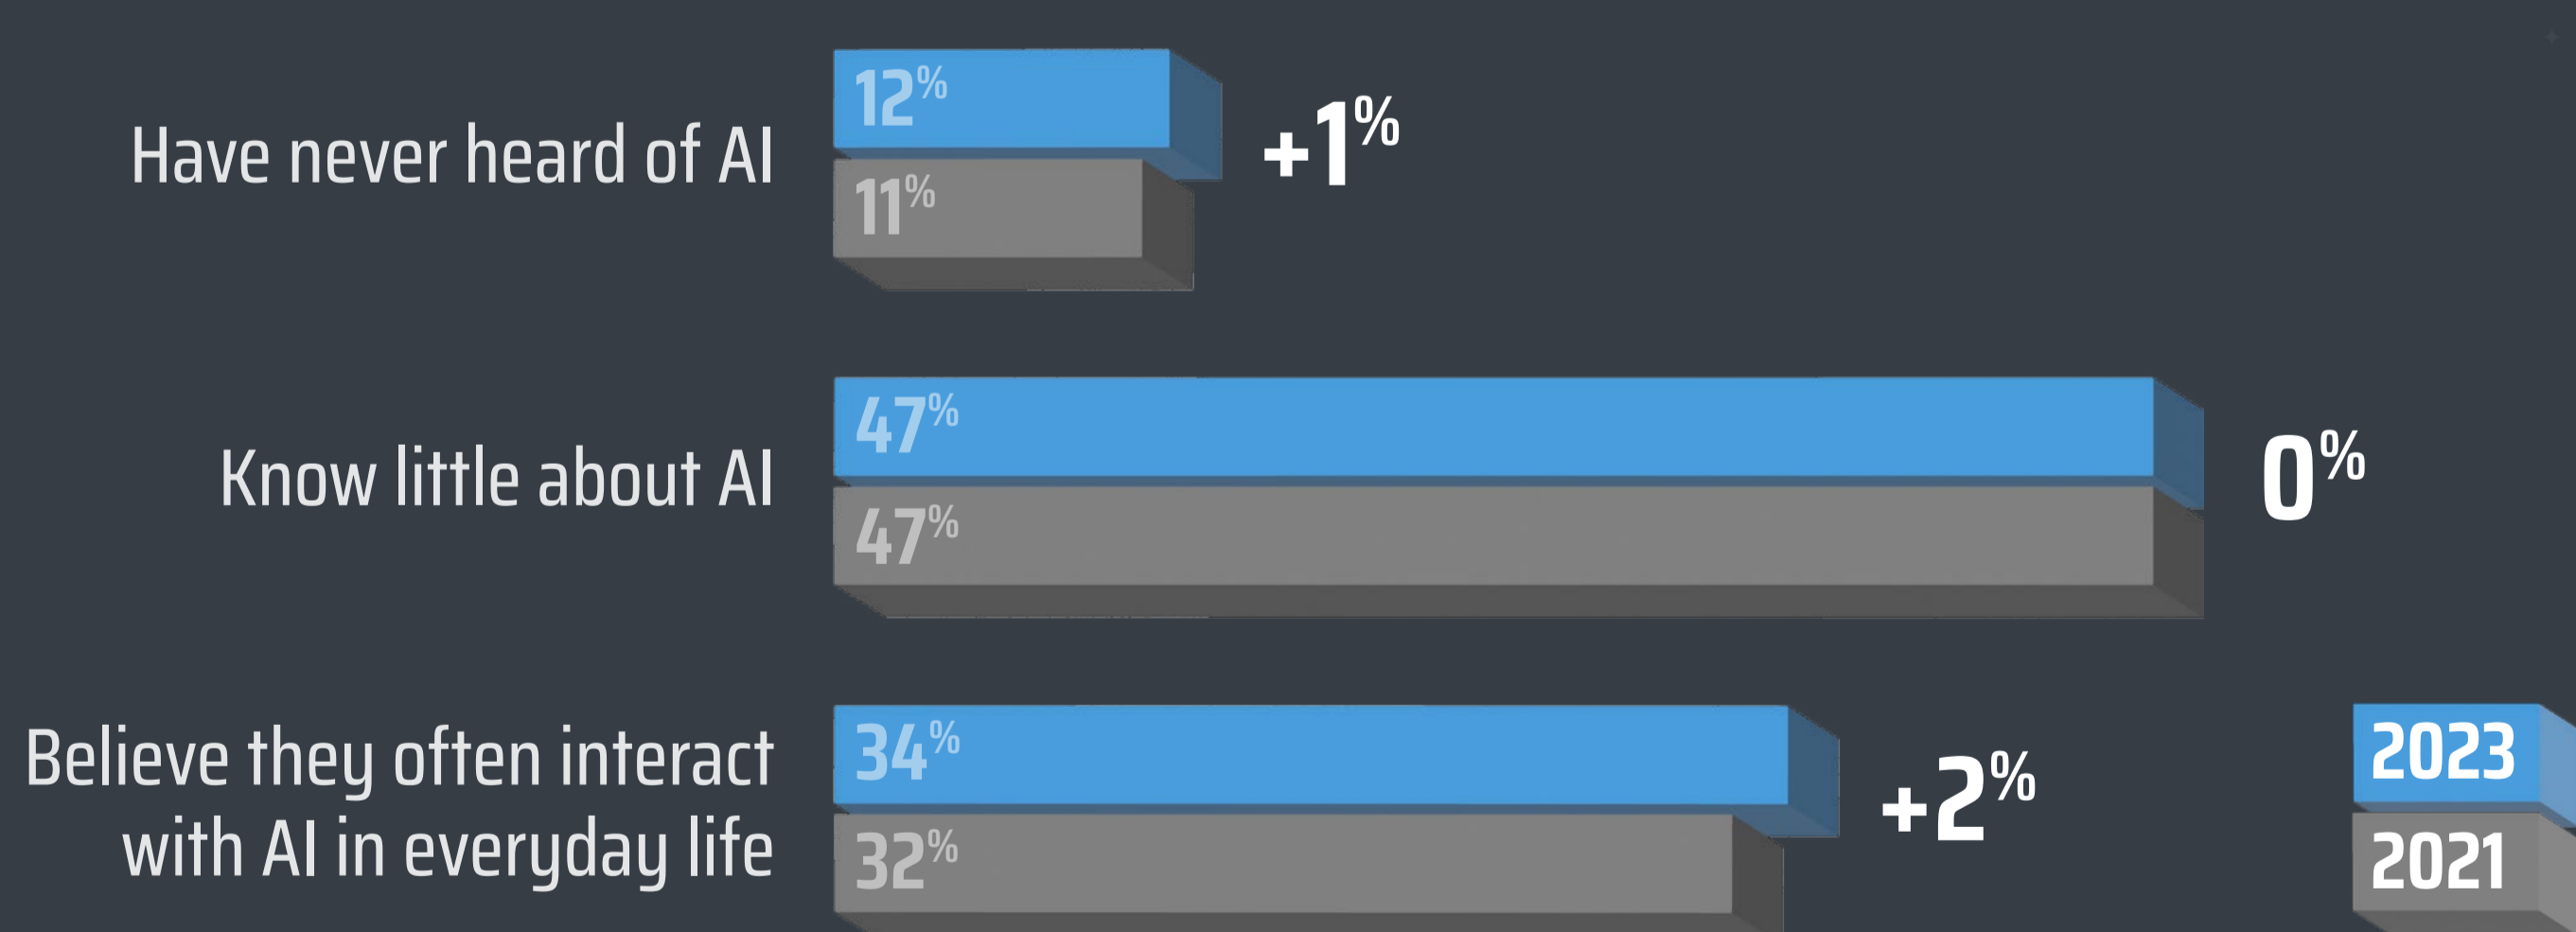

Adults are less likely to say future applications for AI will have a positive impact

More adults say **risks of generative AI in the workforce outweigh the benefits**

Despite the influx of AI applications in American life over the last two years, adults remain unchanged in their knowledge of AI and interaction with it

**Methodology:** The research conducted by Morning Consult on behalf of Stevens Institute of Technology seeks to understand Americans' attitudes, beliefs, and behaviors toward AI as an extension of the 2021 TechPulse study. This poll was conducted between April 25-27, 2023 among a sample of 2,200 adults. The interviews were conducted online and the data were weighted to approximate a target sample of adults based on age, gender, race, educational attainment, region, gender by age, and race by educational attainment. Results from the full survey have a margin of error of +/- 2% percentage points.
